(54) Title: SEALING SYSTEM

(57) **Abstract:** A sealing system comprises a semi-flexible longitudinal strip (10) profile and a sealing material both adapted to maintain a sealed joint between typically relatively vertical and horizontal surfaces. The strip profile (10) comprises a first upper limb (11) having an upper limb upper boundary (12) and an upper limb lower boundary (13) between which there extends an upper limb inner face (14) and an upper limb outer face (18). From the upper limb inner face (14) and/or upper limb boundaries (19) there extends at least one second outer limb (20) having an outer limb inner boundary attached to the upper limb (18) and an outer limb outer boundary (33) between which outer limb boundaries there extends an outer limb upper face (25) and an outer limb lower face (26). A third inner limb and/or filler material is adapted to sealingly engage uncured sealing material and to aid the isolation of the uncured sealing material from the upper limb inner face (17) and/or the outer limb lower face (20).
